Microsoft has unveiled an updated Surface Book design at its special event in New York. Although it's not quite a Surface Book 2, the new iteration packs twice the graphics horsepower of the original and features an upgraded battery offering 16 hours of battery life. It also includes improved cooling thanks to a new fan design and an upgraded Intel Core-i7 processor.

Although it's not quite a Surface Book 2, the new iteration packs twice the graphics horsepower of the original and features an upgraded battery offering 16 hours of battery life. It also includes improved cooling thanks to a new fan design and an upgraded Intel Core-i7 processor.

It still retains the same screen, however, as well as the same form factor and thickness – although the base is now convex rather than flat to accommodate the beefed-up hardware. The new device is available to pre-order in the US from today and will be released on 10 November, costing \$2,399. UK pricing and availability have yet to be announced.
